

## CACFP Instructions – Revised Census 2000 Data

This information is provided for the purpose of using Census 2000 data to determine eligibility of day care home providers in the Child and Adult Care Food Program (CACFP). The data will identify the number of children within a Census Block Group (CBG) that were 12 years of age and younger and will calculate the percentage of these children living in households at or below 185% of poverty.

Two files for each State are provided; one in Microsoft Word (.doc) and the other is in text (.txt) format. The text file is provided in the event a State wants to import the data into another software format, such as Microsoft Excel, for data management purposes.

Each of the attached files was named for the State the data represents. Note the file contains information for every Census Block Group (CBG) in the State. Note that, although the information is displayed for every CBG, not every CBG is area-eligible for the CACFP. The State must first become familiar with the information provided, and then a close examination of the CBG data should be done to eliminate those CBG's that are not area-eligible. After a thorough review of the data has been accomplished, the State or sponsor should follow the instructions provided to generate a map.

Provided below are instructions for becoming familiar with the CBG information and for printing a map to determine day care home eligibility for the CACFP. There are basically two steps to the process, the first is to become familiar with the Census data and the second is to use the Census information to generate a map from the Census website or from another source.

### Census Data Familiarization

Step 1: Open the Word file (or .txt file using a word processor software) for a particular State and review the data format.

The data will look like this Example Shown:

51001 990300 3 70 45 64.3 VA Bloxom town

Step 2: Review the data descriptions below of the Census data. The information is provided in 9 columns.

<u>Column</u>	<u>Description</u>
1	State Code plus County Code (2 digits plus 3 digits = 5 digit number) <b>Example Shown: 51001</b>
2	Census Tract Code (6 digit number) <b>Example Shown: 990300</b>
3	Census Block Group Code (1 digit number) <b>Example Shown: 3</b>
4	Number of Population 12 years or younger in Census Block Group <b>Example Shown: 70</b>

- 5 Number of Population 12 years or younger below 185% of USDA's poverty threshold (includes children in group quarters based on 1-person income threshold) within the Census Block Group. **Example Shown: 45**
- 6 Percent of population 12 years or younger below 185% of USDA's poverty threshold. **For this Census Block Group to be area eligible, this number must be 50.0 or higher. Example Shown: 64.3**
- 7 State Postal Abbreviation (2 digit alpha) **Example Shown: VA**
- 8 Census Place/remainder name. **Example Shown: Bloxom town**

Step 3: In order to be eligible for the CACFP using Census data, the value in column number 7 must be 50.0 percent or higher. Remember, this value represents the percentage of children within that CBG that are at or below 185% percent of poverty in that area. Any value below 50.0 (49.9 or lower) does not qualify as area eligible.

Step 4: For those areas determined to be eligible for the CACFP using Census data, follow these steps to print a map using the American Factfinder feature of the Census Bureaus website. Note, using this method will generate a map that is approximately 4 inches by 5 inches, but does show sufficient detail to determine area boundaries with adequate street references. For additional resources for printing a larger map, please see the attached list of Map Printing Resources.

### **Printing a map:**

- A. Get onto the American Factfinder feature of the Census Bureaus mapping at this website: <http://factfinder.census.gov/>
- B. In the upper left of the webpage, there is link that says, [Enter a street address](#), click this link.

*Note, as you proceed through each step listed below, after each selection is made, the American Factfinder website will change and update information on the page. You will see information (questions) below the question you just answered disappear or you will see lines of information added. This is normal and to be expected.*

- C. The first line on the page says, **Choose a selection method**: Click the round button next to **Name Search**.
- D. After the page adjusts, the next line reads, **Select year and program**: The drop-down box will probably say **Census 2000** already. If so, continue to the next step. Note, **Census 2000** is the ONLY valid option for determining area-eligibility. If **Census 2000** is not displayed, click on the drop-down box and select **Census 2000**.
- E. After the page adjusts the next line reads, **Search for**: Click on the drop-down box and select **Block Group**, which about the 9th item down. Note, Block Group (Census Block Group) provides the lowest level of detail and is only option that should be used.

- F. After the page adjusts the next line reads, **Select a State**: Click on the drop-down box and select your State.
- G. After the page adjusts the next line reads, **Select a county**: Click on the drop-down box and select your County, which matches the place name listed on the file.
- H. After the page adjusts the next line reads, **Select a tract**: Click on the drop-down box and select your Census tract number from the provided file. The **tract** information comes from column 2 of the data. Note, the file shows a 6-digit number, without the decimal. The number in column 2 is the same as the **tract** number displayed, just without the decimal place. For Example Shown, **tract** number 2001.01 is the same as 200101 in Column 2 on the data file.
- I. After the page adjusts the next line reads, **Enter block group**: Enter the 1-digit **block group** number from Column 3 of the data file. After entering the **block group** number, hit the **GO** button just to the right.
- J. After the page adjusts the next line reads, **Select a geography and click 'OK'** . In the dialog box below this line, one or more lines of information may be displayed. Click on the line that includes both the Block group number and tract number. Then click the **Map It** button to the right and the map will appear in a new browser window. To print the map, use the print button or print feature on your screen.
